

## DAY 12: EXPLORING FURTHER

Exploring more on the use of the COUNT () function, GROUP BY and ORDER BY clauses to query a database.

```
/*What are the number of unique industries?*/  
SELECT COUNT(DISTINCT(industry))  
FROM parental_leave;  
  
/*How many companies belong to each industry?*/  
SELECT industry, COUNT(company) AS num_comp  
FROM parental_leave  
GROUP BY industry  
ORDER BY num_comp DESC;
```
