

DAY 9: QUERYING DATABASE CONTINUES

I modified the Parental leave table using the ALTER clause to change the datatypes of some columns and renamed a column.

```
/*Rename a column*/
ALTER TABLE parental_leave
RENAME COLUMN paid_marternity_leave TO paid_maternity_leave;

/*Change the data type of the columns*/
ALTER TABLE parental_leave
ALTER COLUMN paid_paternity_leave TYPE NUMERIC
USING nullif(trim(nullif(paid_paternity_leave, 'N/A')), '')::NUMERIC;

ALTER TABLE parental_leave
ALTER COLUMN unpaid_paternity_leave TYPE NUMERIC
USING nullif(trim(nullif(unpaid_paternity_leave, 'N/A')), '')::NUMERIC;

ALTER TABLE parental_leave
ALTER COLUMN unpaid_maternity_leave TYPE NUMERIC
USING nullif(trim(nullif(unpaid_maternity_leave, 'N/A')), '')::NUMERIC;

@Adanna
```
