DAY 13: CASE STATEMENT

A CASE expression allows the set up of a series of conditions that modify specified values returned by SQL statement. It contains a WHEN, THEN, and ELSE statement, finished with the END keyword.

```sql
SELECT brands, unit_price,
    CASE
    WHEN unit_price <= 200 THEN 'low price'
    WHEN unit_price <= 400 THEN 'medium price'
    WHEN unit_price <= 600 THEN 'high price'
    ELSE 'N/A' END AS price_groups
FROM breweries;
```
